

# Data Structures Homework 2

Group members: Vivek Kunapareddy, Yuan Cheng

## Instructions for compiling and running:

When given a yes or no choice as represented in the console by (Y/N) only enter choice as a single character with yes represented by Y and no represented by N

When asked to enter the amount of money, please enter a integer value

The program will output the amount of money at every point in the game so that you can keep track of it

## Group member contributions:

Dice class was designed by Yuan

Player class was designed by Vivek

All the logic implementation and programming of Play.cpp was done together. All design decisions made within the Play.cpp file were made together
